

Levels of Engagement

Experiment example:

Level 3 – Science Fair

Level 2 – Students figure out the steps to take

Level 1 – Guided inquiry worksheets

Level 0 – Confirming a well known constant.

Task:

During your observations this week, take notes on the level of engagement of the student activities.

1. Predict what you expect based on the lesson plan or worksheet before class
2. Observe the class and note level of engagement . (examples: off task, worksheet mode / note taking, asking questions trying things out, planning their own explorations under a general topic goal set by the teacher, explore topic of their choosing in their own way)
3. Report results. Any measure of learning used by the teacher that you think fairly assesses the results of the activity.
